

Sleeve Bearings

Bronze Flanged Sleeve Bearings - Inch

(Continued from previous page)

Self - Lubricating SAE 841 Also called oilless this porous material impregnated with roughly 19% SAE 30 oil makes a virtually maintenance - free bearings. Oil cushions the bearings adding resistance to shock load and wear.

Alloy 932 Also known as SAE 660 this nonporous cast bearings material makes strong hard bearings that offer excellent resistance to shock load and wear.

High - Strength self - Lubricating SAE 863 Also called super oilless this oil - impregnated material is maintenance free like SAE 841 but even stronger. Perfect for locations where access to bearings is limited.

High - Strength alloy 954 A nonporous cast bearings material that's harder and stronger than alloy 932.

Matrial/Size	Temp. Range	P max	V max	PV max
SAE 841/Inch and Metric	-12° to 104°	2,000	1,200	50,000
Alloy 932/Inch	-12° to 104°	4,000	750	75,000
SAE 863/Inch	-12° to 104°	4,000	225	35,000
Alloy 954/Inch	Maximum is 260°	4,500	225	125,000
