

# Brushes

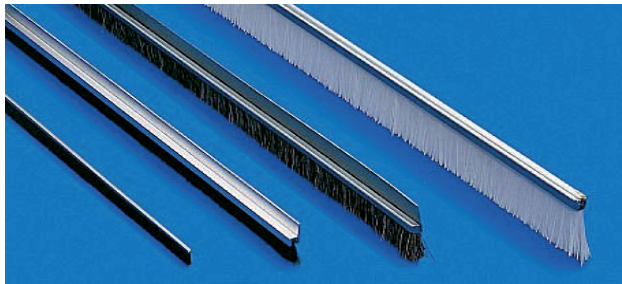

## General Purpose Brush

- ▶ **Stainless steel** - Resists corrosion better than carbon steel and withstands elevated temperatures. Unlike carbon steel, it does not leave deposits that can cause rust on stainless steel workpieces. Sold in a range of bristle diameters to handle everything from tough cleaning to working on delicate parts.
- ▶ **Brass** - Nonsparking and softer than steel and stainless steel. Use for light to medium cleaning, polishing, deburring material removal and static reduction.
- ▶ **Nylon** - The toughest, most durable synthetic material. It has good abrasion resistance for cleaning and scrubbing jobs and works well in wet applications. Nylon has poor to good resistance to dilute acids good resistance to dilute alkalies and good to excellent resistance to mild solvents.

Number	Price ₪	Mfr's	Trim Length	Brush Length	Overall Length	Fill Material

## Strip Brush

Brushes dust stop and separate items on a conveyor and are also ideal for spray heat and chip containment applications.

The dense bristles are held in place by a continuous metal-backed channel and binding wire. Keep in mind, the larger the bristle diameter, the stiffer the bristles. Cut brushes with crimpers.
